

Contest Scoring during 2017

Nick Buckenham

Scoring in 2017

The results at all CIVA championships during 2017 and a good number of other national and international aerobatic competitions were created and published using the ACRO contest scoring software.

There were some minor issues that were swiftly resolved, and the feedback and comments from scorers has as usual helped to develop and improve the system in various areas.

Proposed FPS changes for 2018

A good deal of development during the earlier part of the year by members of the CIVA FPS Working Group has resulted in a detailed proposal to amend the FairPlay process to handle the acceptance of anomalous grades and scores in a smooth and progressive way, rather than the Go/No-Go approach that has been in place since the very beginning.

The extended logic of the process retains well proven FPS methodology to identify erroneous grades and biased scores, but in the new version the accept/reject interventions are applied in a smoother and more stabilised manner. Delegates should refer to the CIVA FairPlay System W/G Report which explains the W/G's findings and proposal in further detail.
